

Customer:
National Signal Corporation
Rail Road Maintenance
Company

Product:
Stabiloc Model 911
Manhole Cover Locking System

Product features:

- ➔ Military grade stainless steel
- ➔ User-friendly system
- ➔ Patented Socket design

Tamper Evident Seal and Corrosion Resistant Materials Lead National Signal to STABILOC

National Signal Corporation is a provider of maintenance services to the railroads and other industries. Their client - CP Railway owns a number of remotely located manhole covers that lead to maintenance access areas within the underground rail system.

Because of the remote location of these manhole covers, which are rarely monitored by law enforcement, they became a easy target for scrap thieves.

Repeated thefts of these covers proved to be an on-going problem to National Signal and CP Rail. More importantly the missing manhole covers posed a significant security threat to the physical well being of the railroad tunnels.

After an evaluation of competing products, National Signal contacted STABILOC and a field visit was made. It was ordered that STABILOC provide matching covers equipped with the STABILOC locking system to solve this problem.

The tamper evident seal and corrosion resistant materials were two determining factors that led National Signal to use STABILOC.
